

Locators • with bore hole, for spring plungers

EH 22020.

Product Description

Locators can be used as a counterpart for all spring plungers with ball. They enable the locking, latching and positioning of the respective workpiece.

These locators with bore hole have 90° notches on all four side surfaces (2x horizontal and 2x vertical to the mounting direction). Thanks to the hardened material, the locators are low-wear and particularly suitable for applications with many repeat cycles.

Material

- Sintered steel, case-hardened

Assembly

We recommend spring plungers with reinforced or heavy spring load. Please consider the insertion depth of the ball (dimension a) into the locator during installation.
